## Hydrotechnik Event during Hannover tradeshow 2017

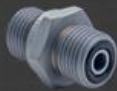

We would like to thank all of our guests who visited our event during the Hannover Messe 2017.

Together with our guests we had an informative and entertaining evening. Our product novelties were presented in an extraordinary way and we hope you had just as much fun as we did.

## The Original MINIMESS® Minivalv

One of our latest products we presented at the customer event is the Original MINIMESS® Minivalv. The Minivalv is a mechanical throttle check valve.

The installation of the Minivalv prevents shaky movements caused by a hydraulic joystick being pressed too quickly – for example in a mini excavator.

The advantage of the Minivalv is that it is not bigger than a commercial screw fitting and can therefore be installed in a minimum of space.

## Protection for measuring channels

Soiled measuring channels needs often intensive processing. You cannot use the easy "Plug and Play" functionality of your Hydrotechnik measuring systems.

If you are not using all analog or frequency measuring channels of your MultiHandy / MultiSystem use our new protection against dirt or moisture.

Hydrotechnik offered with our new O-Ring sealed measuring channel protection a really useful accessory.

Have we aroused your interest?
